

COVID-19

UNCENSORED FACTS

that the media are not reporting

IMPORTANT

COVID is "much less severe" than the "average annual flu"

Dr Martin Feeley
Clinical Director
Irish Health Service (HSE)

"It's worth reinforcing the fact that the great majority of people won't die from this. A significant proportion of people will not get this virus at all. Of those who get symptoms, probably 80% will be mild or moderate."

Dr Chris Whitty
UK Chief Medical Officer

The COVID virus is "less dangerous than we are being led to believe."

Dr Mike Yeadon
former Pfizer Vice President
& Chief Scientific Officer

Most people will probably never get COVID. Most people who do get it will experience no or mild symptoms.*

Most people who do experience symptoms will not need medical care. Most of the people who do need medical care won't need critical care. The tiny percentage of people who do need critical care are likely to survive because the risk of death from COVID is very low and similar to seasonal flu (which has now mysteriously disappeared). Official statistics show **COVID typically has a 99.9%+ survival rate.***

Adults are more likely to die in a car accident than from COVID. Children are more likely to be struck by lightning than die of COVID-19.*

Far more people die directly of other illnesses, such as cancer, heart disease, dementia, pneumonia, accidents, Alzheimer's and suicides every week than of COVID. As with the flu, those most at risk are people with serious pre-existing health conditions such as heart disease, obesity or dementia. Despite all the media propaganda, for most people COVID is not a serious illness.*

Actual Causes of Death in Ireland in 2020

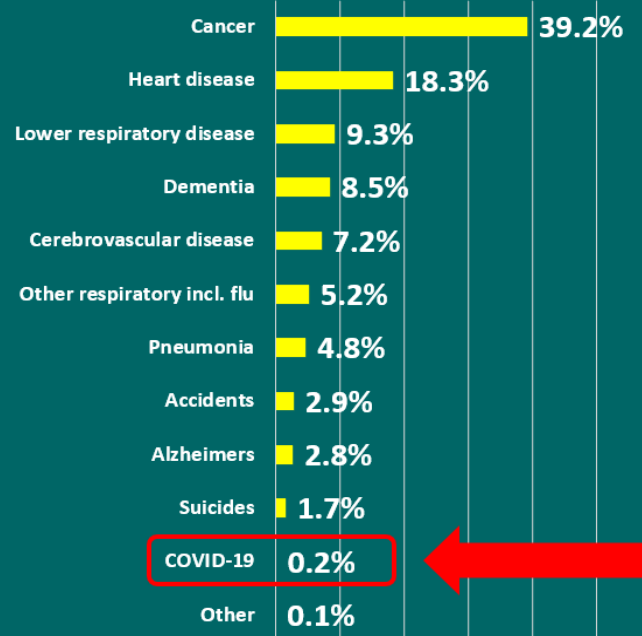

Figure for COVID-19 are deaths in 2020 caused exclusively by COVID and without any other serious health conditions. Source: CSO & HSE.

Broken leg? It's COVID!

If you go to hospital for treatment for, say, a **broken leg**, you will also be given the notoriously unreliable COVID PCR test. If the result is "positive", then you will be recorded as a "hospitalised COVID case". This happens even though you have **no symptoms** and are actually being treated for a totally different issue. This **dishonest and exaggerated 'case' reporting is official World Health Organisation policy.**

Confirmed to the Irish Parliament / Dáil (29/09/20).

A death from cancer or old age? Report it as COVID!

COVID death reports are being massively exaggerated. Anyone in Ireland who dies of any cause but who is suspected 'may' also have COVID is reported as an actual COVID death.

Interesting but not a surprise. In Ireland we counted all deaths, in all settings, suspected cases even when no lab test was done, and **included people with underlying terminal illnesses who died with Covid but not of it.**
